DIVISION OF HIGHWAYS  
DESIGN DIRECTIVE**

**623**

**INTERCHANGE CONTOURED SITE GRADING PLANS**

*November 1, 1994*

Site grading plans will be provided for all interchanges and major intersections. The site grading plans shall show finished contours at 2-foot intervals in solid lines blended to existing contours shown as dashed. Special emphasis shall be given to providing smooth lines by the use of drainage swales and drop inlets in lieu of ditches and wingwalls.

Major intersections shall be the intersection of or with heavily traveled routes where site grading will assist the designer in clearly presenting proper sight distance and aesthetics.
